

Commvault Extends Data Management Capabilities For Microsoft Office 365

May 22, 2018

-- Commvault Helps Service Providers and Enterprise Customers Manage, Migrate and Protect Data in Office 365 with the Commvault Data Platform --

TINTON FALLS, N.J., May 22, 2018 /PRNewswire/ -- [Commvault](#) (NASDAQ: CVLT), a global leader in enterprise backup, recovery, archive, data management and the cloud, today announced expansion of its portfolio with further integrations into [Microsoft Office 365](#) to improve data protection, migration, security, eDiscovery and compliance for its customers. Enterprise IT organizations can now extend their Commvault investments to protect their Office 365 assets. For Commvault's growing ecosystem of Service Provider and Systems Integrator (SI) partners, today's announcement enables them to expand their service portfolio to cover [Office 365 migrations and protection](#), a key challenge that end-user customers are investing in to address as a priority.

Commvault helps customers and its partners maximize their investments in Microsoft 365 and [Office 365 environments](#) by delivering comprehensive data protection, enterprise search that includes Office 365 data and faster migrations while providing uninterrupted access to their information assets.

The migration from on-premises and hosted Microsoft Exchange and Microsoft SharePoint environments to Office 365 requires customers to adopt their on-premises data protection, retention and security strategies to a cloud delivered solution. The [Commvault Data Platform](#) and [Commvault's Endpoint Protection](#) enables customers to extend their on-premises policies to Microsoft 365, Office 365 and Windows 10. A common data platform reduces the risks and instability associated with point solutions.

Commvault provides:

- Accelerated migrations by archiving redundant, out-dated on-premises data prior to migrating to Office 365
- The ability to enable a heterogeneous, storage-agnostic, polycloud eDiscovery and search solution for the enterprise that includes Office 365 content
- Office 365 data management to assist in meeting General Data Protection Regulation (GDPR) requirements
- Advanced data management practices and reduced storage costs as a result of built-in data deduplication and compression
- Reduced operating costs through Commvault's broad storage integrations and the use of commodity storage including Microsoft Azure Storage
- Data governance designs that support need for regulatory compliance and audit requirements with advanced archiving and retention rules
- Enable Microsoft Azure Stack to be a hosting target for Office 365 data management

As customers are navigating this change – often mandated from the C-Suite, they are increasingly looking to Service Provider partners to help them navigate. The Commvault solution enables its expanding ecosystem of [Service Providers](#) to address this need by:

- Cost effective and reliable service delivery through a multi-tenant service platform deeply integrated, with Office 365, Microsoft 365 and Azure.
- Ability to meet the breadth of the customer's data management needs, in addition to Office 365 and Microsoft 365, and therefore become a strategic partner to the customers.

Commvault provides comprehensive, policy-driven data protection and recovery for multiple Microsoft applications, including Exchange Online, Microsoft OneDrive for Business, SharePoint Online, Microsoft Project Online, Windows 10, and any other data located on-premises or across multiple clouds.

"Commvault extends Microsoft's platforms to deliver additional value to our joint customers. Our history of deep support for Microsoft Office 365 and Microsoft 365 is just the latest example of how Commvault embraces, integrates with, and enhances Microsoft solutions, whether it is data on endpoints clients, on-premises infrastructure or in the Cloud," said Randy De Meno, Chief Technologist, Microsoft Products and Microsoft Partnerships, Commvault. "Our partner centered approach to delivering this solution is consistent with our strategy as well as in alignment with how customers are adopting this solution"

Mike Ammerlaan, director, Microsoft Office 365 Ecosystem at Microsoft Corp. said, "Digital transformation is about helping customers reimagine what they do and to help them realize that vision. Commvault's latest integration with Office 365 and Microsoft 365 helps enable seamless adoption and is the next logical step in a collaboration that has helped shape enterprise transformations."

Martin Phillip Maleshyn, CEO, CURAit said, "CURAit is helping guide customers through their journey to the cloud. Microsoft is a clear leader in intelligent cloud services. Coupling the capabilities of Microsoft Office 365 with Commvault's solutions gives us the ability to securely and rapidly

migrate and protect our customer data. This helps us unlock an additional opportunity to address our customers needs and thereby becoming a strategic vendor/partner to them."

Availability

These latest enhancements to Commvault's solutions for Microsoft 365 and Office 365 are available now.
