

Commvault Highlights its Support for Oracle Cloud Infrastructure at Oracle OpenWorld

October 2, 2017

- Support for Oracle Cloud Infrastructure helps customers to protect and recover data workloads in the cloud--
- Showcases enhanced migration and automation capabilities to extend workload portability to the Oracle Cloud--

TINTON FALLS, N.J. and SAN FRANCISCO, Oct. 2, 2017 /PRNewswire/ -- [Commvault](#) (NASDAQ: CVLT), a global leader in enterprise backup, recovery, archive and the cloud, today announced it will highlight its support for [Oracle Cloud Infrastructure](#) at Oracle OpenWorld, held October 1-5, 2017 in San Francisco. Through this new milestone in its longstanding partnership with Oracle, Commvault support for Oracle Cloud Infrastructure helps customers to protect and recover data workloads in and to the cloud.

Using Commvault software with Oracle Cloud Infrastructure, customers can facilitate the extension of the enterprise to the cloud while still managing data as if it never left the physical datacenter. Customers can also use Oracle Cloud Infrastructure as a disaster recovery target to mitigate risk and potential loss of business and reputational damage.

"Commvault provides unparalleled flexibility to seamlessly migrate key databases and application data to the Oracle Cloud at a time when CIOs and entire IT organizations are under pressure to 'lift and shift' dev/test workloads to the cloud, and be more agile," said N. Robert Hammer, Chairman, President and CEO, Commvault. "Commvault helps organizations smoothly move workloads to the Oracle Cloud and overcome potential compatibility concerns with uniquely broad support for enterprise applications, storage arrays and cloud storage providers."

Also at the conference, Commvault will demonstrate its enhanced migration capabilities to the Oracle Cloud. Through the [Commvault Data Platform](#), Commvault enables customers to accelerate workload portability of both Oracle and non-Oracle data sets to the Oracle Cloud, providing organizations with increased data protection and disaster recovery options in the cloud while helping improve overall operational efficiency.

"In today's highly competitive environment, organizations moving to the cloud are looking for the greatest flexibility and fastest time to value," said Hamidou Dia, Senior Vice President, Solution Engineering and Cloud Customer Success, Oracle. "Through its single data management platform, Commvault can help customers modernize their data management strategy by being able to securely migrate data workloads to the Oracle Cloud to better protect, recover and use it when needed as a strategic asset to their business."

Faced with the exponential growth of Oracle applications and data, many organizations find it challenging to keep their data protected and extract value from it at the same time. With the Commvault Data Platform, a single solution protects the data in an Oracle environment and also provides a unified approach to deriving value and business insight. From dev/test to production to archiving and retirement, Commvault covers the entire lifecycle of an enterprise's most important data — helping improve application performance, accelerate innovation, reduce costs and bring copy data management under control.

Commvault Leads Insightful Sessions at Oracle OpenWorld

Commvault will also be participating in three sessions during the conference:

- Session: Complete Application Migration of Oracle E-Business Suite to Oracle Cloud
 - Tuesday, October 3, 1:00 p.m. PT
 - Location: Moscone South, The Exchange Theater South 1
