

Commvault and Hewlett Packard Enterprise Partner to Deliver Commvault's Industry Leading Healthcare Data Management and Protection Solutions to HPE Healthcare Customers

March 5, 2018

-- Through HPE Complete, HPE healthcare customers can easily purchase pre-validated, fully integrated, Commvault solutions for managing and protecting healthcare data on HPE infrastructure --

LAS VEGAS, TINTON FALLS, N.J. and PALO ALTO, Calif., March 5, 2018 /PRNewswire/ -- **HIMSS18 Conference & Exhibition**

-- [Commvault](#) (NASDAQ: CVLT), a global leader in enterprise backup, recovery, archive and the cloud, today announced a strategic partnership with Hewlett Packard Enterprise (HPE) to deliver Commvault healthcare solutions to HPE customers. Through this reseller agreement [announced today](#), HPE and its global network partners will now be selling [fully integrated and pre-validated](#) versions of [Commvault's portfolio of healthcare solutions](#) on HPE infrastructure. These solutions include [Commvault Clinical Archive](#) and the [Commvault Data Platform](#) to protect and manage critical MEDITECH, Epic and other EHR data, as well as medical images across the healthcare enterprise, with a fast, simple and comprehensive solution. Today's announcement was made at [HIMSS18](#), being held March 5–9, in Las Vegas.

These new Commvault healthcare solutions extend the scope of the HPE Complete Commvault Software offering, enabling healthcare customers with industry-leading data protection that is tightly integrated and optimized for HPE Storage and other infrastructure products, including HPE StoreOnce, HPE 3PAR, HPE Nimble Storage, HPE Apollo, and HPE Proliant. The introduction of [Commvault Clinical Archive](#) on HPE infrastructure is the first enterprise medical image management solution HPE has brought to the market, and is designed to simplify access to - and management of - imaging data created in disparate PACS solutions.

"Increasing amounts and types of mission-critical data, stricter regulatory requirements, and the growing threat from ransomware and other cybersecurity attacks are increasing the costs and complexity of data management and protection for healthcare organizations," said Patrick Osborne, director of storage and big data product management at HPE. "With this agreement, our healthcare customers now have a one-stop shop for finding HPE integrated and certified Commvault solutions that help them to simplify data management and protection, increase data availability, reduce costs, and minimize regulatory compliance risk, while also empowering them to better activate data for valuable insights."

"Our partnership with HPE significantly increases the opportunity to get our powerful data management solutions into the hands of healthcare organizations facing enormous challenges related to data management and protection," said Fred Mills, senior director, Commvault Healthcare at Commvault. "The availability of fully integrated, certified Commvault healthcare solutions from HPE marks a significant step forward in making it easier for the healthcare industry to implement holistic data management strategies that accelerate digital transformation initiatives and improve patient care while reducing IT complexity."

Commvault healthcare solutions sold through HPE include:

- **Commvault Clinical Archive** – Combining clinical archiving with a comprehensive data management platform, Commvault Clinical Archive transforms vendor-neutral archiving (VNA) into a complete "enterprise image archiving" solution, and simplifies access to - and management of - data created in disparate PACS solutions. Commvault Clinical Archive provides the flexibility to archive medical imaging data on premises, in the cloud, or in a hybrid storage solution. It ensures all archived data is readily available for use by clinicians; the archive can be configured to deliver relevant historical studies identified with a DICOM modality worklist or HL7 ADT interface. Plus, the open platform supports all common data standards — DICOM and non-DICOM images — as well as PDFs, JPEGs, annotations, and more. Because it is based on the Commvault Data Platform, data can be moved to the cloud with ease. Commvault's clinical archiving capabilities also provide a simple, cost-effective way to manage, migrate and retire legacy PACS applications.
- **Epic, MEDITECH, and other vendor-agnostic EHR Data Protection** – Automated snapshot management is at the heart of Commvault's EHR data protection. The array-based storage hardware snapshots are integrated directly into the data management platform for seamless protection of data for all EHR systems and sub-systems. Entire file systems and databases can be recovered within moments of failure — mitigating the risk of patient information loss.

HPE and Commvault will both be exhibiting at the HIMSS18 Conference & Exhibition, March 5-9, 2018 in Las Vegas. Commvault will be at number 8001. HPE will be at booth number 2127.

Availability

Commvault's healthcare solutions are available through HPE's direct and global reseller channels.

About Commvault Healthcare

Commvault is a leading provider of data protection and information management solutions, helping healthcare organizations worldwide handle massive volumes of data, meet compliance requirements, and deliver quality patient care. Through its single integrated platform, the Commvault Data Platform, Commvault provides healthcare organizations with enterprise data protection, enabling them to scale infrastructure easily and

cost-effectively while maintaining the security and privacy of patient information. Commvault Software includes data encryption capabilities, enabling healthcare providers to meet the Health Insurance Portability and Accountability Act (HIPAA), Health Information Technology for Economic and Clinical Health (HITECH) Act and other patient data privacy compliance requirements.

About Commvault

Commvault is a leading provider of data protection, cloud and information management solutions, helping companies worldwide activate and drive more value and business insight out of their data. With solutions and services delivered directly and through a worldwide network of partners and service providers, Commvault solutions comprise one of the industry's leading portfolios in data protection and recovery, cloud, virtualization, archive, file sync and share. Commvault has earned accolades from customers and third party influencers for its technology vision, innovation, and execution as an independent and trusted expert. Without the distraction of a hardware business or other business agenda, Commvault's sole focus on data management has led to adoption by companies of all sizes, in all industries, and for solutions deployed on premise, across mobile platforms, to and from the cloud, and provided as-a-service. Commvault employs more than 2,700 highly- skilled individuals across markets worldwide, is publicly traded on NASDAQ (CVLT), and is headquartered in Tinton Falls, New Jersey in the United States.
