

Commvault Achieves AWS Outposts Ready designation

September 15, 2020

TINTON FALLS, N.J., Sept. 15, 2020 /PRNewswire/ -- Commvault (NASDAQ: CVLT), a recognized global enterprise software leader in the management of data across cloud and on-premises environments, today announced that it has achieved the AWS Outposts Ready designation, part of the Amazon Web Services (AWS) Service Ready Program. This designation recognizes that [Commvault Complete™ Data Protection](#) has demonstrated successful integration with AWS Outposts deployments. AWS Outposts is a fully managed service that extends AWS infrastructure, AWS services, APIs, and tools to virtually any datacenter, co-location space, or on-premises facility for a truly consistent hybrid experience.

Achieving the AWS Outposts Ready designation differentiates Commvault as an AWS Partner Network (APN) member with a product fully tested on AWS Outposts. AWS Outposts Ready products are generally available and supported for AWS customers, with clear deployment documentation for AWS Outposts. AWS Service Ready Partners have demonstrated success building products integrated with AWS services, helping AWS customers evaluate and use their technology productively, at scale and varying levels of complexity.

"Customers are looking for ways to monitor and easily recover protected resources across their digital estate as part of a comprehensive disaster recovery strategy," said Joshua Burgin, General Manager, AWS Outposts, Amazon Web Services, Inc. "With Commvault Complete™ Data Protection available to customers on AWS Outposts, customers can benefit from backup services designed to reliably protect their data on their infrastructure, on AWS Outposts, or in AWS Regions, for a truly consistent hybrid experience."

"Commvault is proud to achieve AWS Outposts Ready status," said Rahul Pawar, VP Product Management, Commvault. "Our team is dedicated to helping companies achieve their technology goals by leveraging the agility, breadth of services, and pace of innovation that AWS provides."

To support the seamless integration and deployment of AWS Outposts ready solutions, AWS established the [AWS Outposts Ready Program](#) to help customers identify products integrated with AWS Outposts and spend less time evaluating new tools, and more time scaling their use of products that are integrated with AWS Outpost deployments.

Commvault provides comprehensive back up, restore, and migration capabilities for customers looking to adopt AWS Outposts. With Commvault's additional layer of protection for Amazon Elastic Compute Cloud (Amazon EC2), Amazon Relational Database Service (Amazon RDS), and Amazon Elastic Kubernetes Service (Amazon EKS) instances within AWS Outposts, businesses can now consider themselves 'recovery ready' for AWS Outposts workloads. Commvault's automated migration tools help move applications from both on-premises and AWS Regions into AWS Outposts to accelerate ROI. [Commvault Disaster Recovery](#), a component of Commvault Complete Data Protection, and workload resilience features also improve application availability across on-premises environments, AWS Outposts deployments, and AWS Regions.

About Commvault

Commvault is a worldwide leader in delivering data readiness, enabling customers to intelligently manage data with solutions that store, protect, optimize and use data. Commvault software automates mind-numbing IT tasks and makes data work harder for customers— so they can gain invaluable insights for their businesses. Commvault solutions work across cloud and on-premises environments, leveraging the digital tools and procedures already in use. Commvault software, solutions and services are available from the company and through a global ecosystem of trusted partners. Commvault employs more than 2,300 highly skilled individuals across markets worldwide, is publicly traded on NASDAQ (CVLT), and is headquartered in Tinton Falls, New Jersey in the United States.
