

## Commvault Named a Leader for 14th Consecutive Time in the 2025 Gartner® Magic Quadrant™ for Backup and Data Protection Platforms

June 26, 2025

*Recognized by Gartner as a Leader for Completeness of Vision and Ability to Execute*

TINTON FALLS, N.J., June 26, 2025 /PRNewswire/ -- Commvault, a leading provider of cyber resilience and data protection solutions for the hybrid cloud, today announced that it has been positioned by Gartner as a Leader in the Magic Quadrant for Backup and Data Protection Platforms<sup>1</sup> for its Commvault Cloud platform. The evaluation was based on specific criteria that analyzed the company's overall Completeness of Vision and Ability to Execute.

Commvault Cloud provides unified data protection and cyber resilience across cloud, on-premises, and hybrid workloads. The platform helps organizations accelerate recovery from ransomware and other cyber incidents through features like automated application and infrastructure recovery, advanced Active Directory protection, and comprehensive data visibility. By unifying these functions, Commvault can help customers improve cyber preparedness and resilience and operate in a state of continuous business.

"Our customers operate in a complex hybrid world where the threat of a cyberattack is more daunting than ever before. We feel this placement from Gartner reflects our relentless focus on addressing our customers' most critical cyber resilience challenges," said Pranay Ahlawat, Chief Technology and AI Officer, Commvault. "The Commvault Cloud platform unifies the broadest workload protection with AI-enabled protection and rapid recovery, providing the confidence our customers need to move their business forward."

Over the last year, Commvault has continued to deliver innovations, including cloud-first technologies, that Commvault believes address some of the most pressing cyber resilience challenges customers are facing today. A sampling of these innovations include:

- [Active Directory Forest Recovery](#): Brings a new level of resilience to Active Directory by enabling automated, rapid recovery of the Active Directory forest, which includes users, groups, permissions, and domain controllers across the organization. This new offering eliminates slow and error-prone manual processes often associated with Active Directory forest recoveries.
- [Cloud Rewind](#): Designed to quickly restore an organization's entire cloud application and data environment – including all the necessary cloud infrastructure configurations – in a highly automated way.
- [Clumio Backtrack](#): Leveraging Amazon S3 Versioning, Backtrack uniquely empowers organizations to recover datasets of practically any size, from individual objects to whole Amazon S3 buckets where billions of objects may be stored.
- [Recovery Range](#): The first hands-on cyber range that enables defenders to battle sophisticated cyber threats and real-world attacks while also equipping them with the skills required to navigate and rapidly recover from cyber crises.

Magic Quadrant reports are a culmination of rigorous, fact-based research in specific markets, providing a wide-angle view of the relative positions of providers in markets where growth is high and provider differentiation is distinct. Providers are positioned into four quadrants: Leaders, Challengers, Visionaries, and Niche Players. The research enables you to get the most from market analysis in alignment with your unique business and technology needs.
