

Commvault Expands FedRAMP High Authorized Cyber Resilience Services to Managed Service Providers

September 15, 2026

New MSP route to market helps service providers protect and recover sensitive government data while supporting customers' evolving federal cybersecurity requirements

TINTON FALLS, N.J., Sept. 15, 2026 /PRNewswire/ -- Commvault (NASDAQ: CVLT), a leader in unified resilience at enterprise scale, today announced that qualified managed service provider (MSP) partners can now offer services built on [Commvault Cloud for Government](#), a FedRAMP High Authorized service. This milestone helps service providers deliver FedRAMP High Authorized data protection and cyber resilience services to U.S. federal agencies and organizations across the Defense Industrial Base (DIB).

Through Commvault's MSP model, service providers can now deliver a platform that helps federal customers protect sensitive data, support recovery operations, and align with evolving federal cybersecurity and compliance requirements for both FedRAMP and the Cybersecurity Maturity Model Certification (CMMC).

"MSPs need a platform they can build a business on and today that includes delivering trusted and scalable resilience services to customers," said Mario Pirolozzi, Vice President, Managed Service Providers for Commvault. "For partners serving federal agencies and defense entities, providing FedRAMP High Authorized capabilities enables them to do that – helping customers protect sensitive data, strengthen recovery, and meet evolving security requirements."

"Federal and defense customers aren't just asking whether their data is protected – they need confidence that the services supporting their mission can stand up to rigorous security requirements and recover when disruption occurs," said Kevin Cronin, CEO, KELYN Technologies. "Combining Commvault's FedRAMP High Authorized capabilities with an MSP delivery model gives us a powerful foundation for helping customers protect critical data while staying focused on their missions."

Helping MSPs Protect Data and Strengthen Recovery

For MSPs serving federal agencies, defense contractors, and other organizations handling sensitive government information, Commvault Cloud for Government provides a trusted foundation for delivering cyber resilience services. That foundation enables MSPs to:

- **Protect sensitive government data across complex environments:** Provide data protection across hybrid, SaaS, and on-premises workloads in high-security federal environments.
- **Support cybersecurity and compliance responsibilities:** FedRAMP High Authorized cloud services provide inherited security controls that can help MSPs address portions of their security obligations. Commvault's FedRAMP High authorization also enabled rapid achievement of CMMC Level 2 compliance and can help organizations support applicable NIST SP 800-171 and CMMC requirements within their own environments and assessment scopes.
- **Recover critical data and operations with confidence:** Help federal and DIB customers rapidly recover data and restore critical operations following cyber incidents, outages, or other disruptions.

Availability

Commvault Cloud for Government services are available to qualified MSP partners in the United States via the [FedRAMP Marketplace](#). For more information about Commvault Cloud for Government, visit: <https://www.commvault.com/fedramp-high-authorized>.

About Commvault

Commvault (NASDAQ: CVLT) is a leader in unified resilience at enterprise scale. In a constantly evolving threat landscape, Commvault keeps customers ready by unifying data security, identity resilience, and cyber recovery, on one cloud-native, AI-enabled platform. Customers trust Commvault to conduct the fastest, most complete recoveries – not just their data, but their entire business. Purpose-built for the agentic enterprise, Commvault also enables organizations to safely embrace AI while protecting against AI-driven threats.
