

Commvault Achieves AWS Data Competency in Relational Databases Category

September 30, 2026

TINTON FALLS, N.J., Sept. 30, 2026 /PRNewswire/ -- Commvault (NASDAQ: CVLT), a leader in unified resilience at enterprise scale, today announced that it has achieved the AWS Data Competency in the Relational Database category. This designation recognizes Commvault for its demonstrated expertise delivering unified data architectures on Amazon Web Services (AWS), helping customers build the data foundations that power modern analytics and AI workloads.

Achieving the AWS Data Competency differentiates Commvault as a member of the AWS Partner Network (APN) with deep technical proficiency and proven customer success delivering data solutions on AWS. The Data Competency validates partners across the full data lifecycle—from databases and analytics to streaming, data engineering, and AI-ready foundations—reflecting how customers build and modernize their data architectures.

Commvault achieved the AWS Data Competency in the Relational Databases category by delivering cyber-resilient data protection for relational database workloads on AWS, helping customers securely protect, recover, and manage business-critical data across Amazon Relational Database Service (RDS) environments. Commvault solutions delivered via SaaS, software, or appliance help organizations protect Amazon RDS and Amazon Aurora with automated backups, point-in-time recovery, and immutable, air-gapped storage, reducing complexity while improving cyber resilience and recovery readiness.

"Achieving the AWS Data Competency in Relational Databases reflects our continued commitment to helping organizations get more value from their data while strengthening resilience on AWS," said Brian Lanigan, Chief Partner Officer, Commvault. "As enterprises accelerate AI initiatives and modernize critical workloads on AWS, Commvault enables them to recover their data with confidence, reducing complexity and helping keep their information ready to drive innovation and business outcomes."

AWS is enabling scalable, flexible, and cost-effective solutions from startups to global enterprises. To support the seamless integration and deployment of these solutions, the AWS Competency Program helps customers identify AWS Partners with deep industry experience and expertise across industries, use cases, and workloads to help grow their business.

Commvault holds numerous service validations, certifications, and AWS competencies, including the AWS Storage Competency and AWS Resilience Competency in the Recovery category.
