

CommVault Showcases Data Management Leadership at Storage Networking World

March 31, 2009

-- CommVault to Present a Face-Off on Software-based Deduplication vs. Appliance-based Deduplication; CommVault

Customer Named a Finalist in the Best Practices Awards --

OCEANPORT, N.J.--(BUSINESS WIRE)--Mar. 31, 2009-- CommVault (NASDAQ: CVLT):

News Facts:

- <u>CommVault</u> will showcase its block-level deduplication and data management expertise through presentations and demonstrations at the SNW Spring conference.
- Michael Marchi, vice president of Product & Segment Marketing at CommVault, will discuss the benefits of software-based deduplication vs. appliance-based deduplication. Data reduction continues to be a priority for enterprises as they face the challenge of managing continued data growth with flat or reduced IT budgets. This session will provide attendees with ways to evaluate the effectiveness of various deduplication approaches, as well as provide best practices on how to leverage dedupe offerings to reduce data storage and management costs.
- In addition, Herbalife® Ltd., a CommVault customer, has been selected as a finalist for Storage Networking World's (SNW) "Best Practices in Storage" award for "Storage Reliability and Data Recovery," marking the third time in four years a CommVault customer has been recognized for this award. The award acknowledges successful implementation strategies and programs that ensure highly available information and data access. Winners will be named at the awards ceremony/reception, taking place on Wednesday, April 8, 2009 at SNW.
- CommVault has also launched a new simplified version of its <u>Dedupe Calculator</u>, which only requires a user to indicate the
 overall size of the backup data set to get started. The Dedupe Calculator illustrates how a global, embedded approach to
 data management can provide superior value based on each customer's particular environment. It also provides links to
 additional information, and can be used to request highly personalized walkthroughs with customized backup windows,
 data mix, and other relevant factors.
