CommVault Showcases Enhanced Data Management Capabilities for Microsoft Environments at 2009 Tech-Ed Conference

May 6, 2009

-- CommVault to Provide Live Demos of Simpana 8 Software for Microsoft Environments --

OCEANPORT, N.J., May 06, 2009 (BUSINESS WIRE) -- CommVault (NASDAQ: CVLT):

News Facts:

- [CommVault](#) will showcase its industry-leading [Simpana(R) 8](#) software with enhancements to its support for Microsoft Corp. data and applications, at the upcoming Microsoft Tech-Ed Conference.
- As a bronze sponsor, CommVault(R) technology experts will be on hand to provide attendees one-on-one demonstrations of Simpana 8 software at Booth #310.
- CommVault recently [announced](#) that Simpana 8, the only truly unified data management platform, has been tightly integrated with key Microsoft applications to provide superior data and information management for [Microsoft Windows Server 2008](#), [Microsoft Exchange Server 2007](#), [Microsoft SQL Server](#), [Microsoft Office SharePoint Server 2007](#) and Active Directory.
- Simpana 8 provides Microsoft customers with benefits including electronic records management, tight integration with the Microsoft FAST indexing engine, data reduction, backup and recovery and content management, management of virtual server environments, discovery capabilities, and performance enhancements for Office SharePoint Server 2007.
- With the industry's [first global embedded software deduplication](#), Simpana 8 software offers a holistic approach to data deduplication that spans both disk and tape tiers of storage. CommVault extends this feature for Microsoft users by enabling a simple 64-bit Windows Server 2008 with commodity disk to be a deduplication target at a much more attractive price than a comparable dedicated appliance. Further, CommVault's unique, end-to-end approach expands the benefits of block-level deduplication for Exchange Server 2007 and Office SharePoint Server 2007 across all backup and [archive](#) copies within an organization, resulting in cost-efficient scaling and performance across the entire data management infrastructure.
